GENERATION 2

DANGER

ISOLATE DEVICE FROM POWER

Failure to isolate power supply before installation or maintenance may result in fire, serious injury, electric shock, death and may damage the luminaire.

Product Warranty is void if product is not installed as per installation instructions and in compliance with the local electrical code.

READ ALL SAFETY INSTRUCTIONS FIRST

- Follow instructions carefully; failure to do so will void warranty.
- Ensure installation complies with local laws and applicable standards
- Only use Lumascape power supply, control equipment and leader cables.
- Ensure mains input power is surge protected.
- Never make connections whilst power is connected.
- Do not make modifications or alter product.
- Connectors are to be kept clean and dry at all times.
- Once installed, all connectors are to be mated and a PowerSync™ terminator is required on the last fitting of run.

GENERATION 2

Testing Functions

To assist with installation, the **LS6540** provides three (3) test modes for PowerSync™ luminaires. These require only connected luminaires and power, and no connected input signal.

If an input signal is connected, the **LS6540** will not respond to this signal in any of the modes below.

NOTE: These test signals apply to the relevant unit's PowerSync™ output only –– it will not be passed through on the DMX / RDM connectors if multiple **LS6540** units are connected.

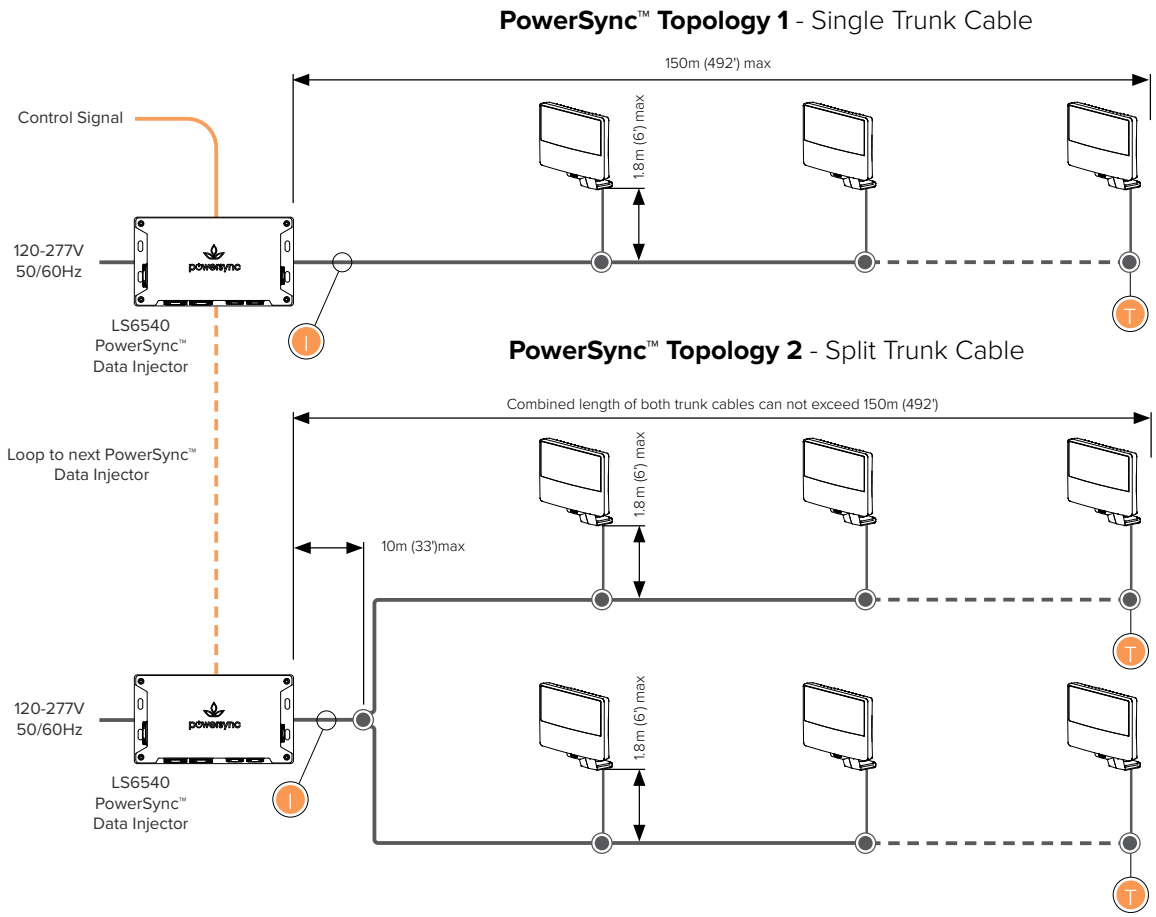
GENERATION 2

Network Topology – PowerSync Dimmable



Up to 45 luminaires per run under the following conditions:

- Max total cable run length 150m (492') in up to two trunk cables
- For run lengths in excess of 30m (100'), the data wire gauge cannot exceed 12-14 AWG (2.5mm²)
- For run lengths up to 30m (100'), the data wire gauge is not governed
- Refer to 'Maximum Circuit Load' table for circuit limitations
- Always observe local electrical codes for branch circuit current limitations

Terminator

Use PowerSync™ terminator, supplied with leader cable to terminate last luminaire in chain.

Maximum Current

≤16.0A through LS6540 Data Injector.

Connection Type

Circuits can be configured as either connectorised or hardwired. For details consult installation instructions and comply with local electrical codes.

PLEASE CHECK LUMINAIRE DATASHEETS FOR CIRCUIT LOADING AND ELECTRICAL LIMITATIONS.
